FuseRemit BRD

1. Executive Summary

FuseRemit is a next-generation, AI-powered financial technology platform designed to modernize the international money transfer market. By integrating a conversational AI assistant, providing transparent pricing, and ensuring bank-level security, the platform will offer a faster, cheaper, and more intuitive user experience than traditional remittance services. This document outlines the business objectives, scope, target audience, and functional/non-functional requirements for the Minimum Viable Product (MVP) and subsequent feature roll-out.

2. Business Objectives & Success Metrics

The primary goal is to capture a significant share of the digital remittance market by delivering a superior product experience.

Business Objective	Key Performance Indicators (KPIs)
Achieve Product-Market Fit	- High User Retention & Low Churn Rate (<5% monthly) - Net Promoter Score (NPS) > 50
Drive User Growth & Adoption	- 10,000 Monthly Active Users (MAU) within 6 months - Customer Acquisition Cost (CAC) below industry average
Validate Business Model	- Achieve $1M in Total Transaction Volume (TTV) within 3 months - Positive unit economics per transfer
Ensure Platform Stability & Trust	- 99.9% application uptime - Zero critical security breaches
Demonstrate AI Value	- >30% of users interact with the AI assistant monthly - High user satisfaction score for AI-assisted tasks

3. Target Audience

Primary Persona: The Family Supporter (e.g., a nurse in the USA sending money to family in Nigeria).
Needs: Reliability, low cost, ease of use, mobile access, and peace of mind.

Secondary Persona: The Small Business Owner (e.g., an e-commerce entrepreneur paying suppliers in India).
Needs: Competitive exchange rates, clear transaction records for accounting, and fast transfer speeds.

Tertiary Persona: The International Student (e.g., a student in the UK receiving funds from parents in Japan).
Needs: Low fees, quick access to funds, and a simple mobile interface.

4. Project Scope

4.1. In-Scope (For Phased Roll-out):

- Secure user registration and authentication (KYC/AML integration).
- AI-powered conversational chat for support and transactions.
- Core remittance flow: sending money to designated bank accounts.
- Recipient management (add, edit, save).
- Comprehensive transaction history and real-time status tracking.
- User profile management and security settings.
- Automated email/push notifications.

4.2. Out-of-Scope (For Future Consideration):

- Physical cash pickup/delivery services.
- Bill payments or mobile airtime top-ups.
- Cryptocurrency-based transfers.
- Business-specific features like mass payouts or invoicing.
- In-app peer-to-peer (P2P) payments.

5. High-Level Functional Requirements

The platform must allow users to securely and efficiently send money internationally. Key functional areas include user onboarding, the core transfer process, recipient management, transaction tracking, and an integrated AI assistant. (See detailed feature list below).

6. Non-Functional Requirements

6.1. Security:

- End-to-end encryption for all data in transit and at rest.
- Compliance with KYC (Know Your Customer) and AML (Anti-Money Laundering) regulations.
- Two-Factor Authentication (2FA) for user accounts.

- Regular security audits and penetration testing.

6.2. Performance:

- API response times < 200ms for all critical endpoints.
- Page load times < 3 seconds on a standard internet connection.
- Transaction confirmation to the user within 10 seconds.

6.3. **Scalability & Reliability**:

- The platform must support 100,000+ users without performance degradation.
- Target 99.95% uptime, with automated monitoring and alerts.
- Blue-green or canary deployment strategies to ensure zero-downtime releases.

6.4. Compliance:

- Adherence to financial regulations in all operating regions (e.g., GDPR in Europe).
- Secure logging and audit trails for all financial transactions.

7. Product Features & Roll-out Plan

This backlog is structured for an agile roll-out, focusing on delivering core value quickly while building towards a feature-rich platform.

7.1. Phase 1: Core Remittance MVP (Weeks 1-6) - Launching the core FuseRemit experience.

Goal: Enable users to securely sign up and complete an end-to-end international money transfer.

Epic	User Story	Priority
User Onboarding	As a new user, I can create an account with my email and password so that I can access the platform.	Must-Have

Epic	User Story	Priority
	As a new user, I must complete a basic KYC identity verification (e.g., name, address, DOB) to comply with regulations.	Must-Have
Dashboard	As a user, I want to see a summary of my recent activity and key stats on a central dashboard.	Must-Have
Recipient Mgmt.	As a user, I can add, save, and edit a recipient's bank details so I can send them money easily in the future.	Must-Have
Send Money	As a user, I can select a recipient, enter an amount, see the live exchange rate and fees, and initiate a transfer.	Must-Have
Transaction History	As a user, I can view a list of all my past and pending transfers with their current status.	Must-Have
AI Assistant (V1)	As a user, I can ask the AI assistant basic questions (e.g., "what are the fees to India?") and receive helpful answers.	High
Notifications	As a user, I want to receive an email confirmation when I initiate a transfer and when it's delivered.	High

7.2. Phase 2: Enhancing Trust & Engagement (Weeks 7-12)

Goal: Build user trust with enhanced security and improve the experience with more intelligent features.

Epic	User Story	Priority
Security	As a user, I want to enable Two-Factor Authentication (2FA) to better secure my account.	Must-Have
Profile Mgmt.	As a user, I can manage my personal information and change my password.	Must-Have

Epic	User Story	Priority
AI Assistant (V2)	As a user, I can ask the AI, "What's the status of my last transfer to John Doe?" and get a real-time update.	High
	As a user, I can ask the AI, "How much have I sent this year?" and receive a summary from my transaction data.	High
Transaction Details	As a user, I can click on a transaction in my history to see a detailed receipt and track its progress visually.	High
UX/UI Polish	As a developer, I will refine the UI based on initial user feedback to improve navigation and clarity.	Medium
Referral Program	As a user, I can share a unique referral link with friends to earn a discount on my next transfer.	Medium

7.3. Phase 3: Scaling & Optimization (Weeks 13-20)

Goal: Expand delivery options, streamline workflows, and introduce advanced analytics.

Epic	User Story	Priority
Delivery Options	As a user, I want the option to send money for cash pickup or to a mobile wallet in select countries.	High
Advanced KYC	As a user, I can complete advanced KYC (e.g., document upload) to increase my sending limits.	High
AI Assistant (V3)	As a user, I can tell the AI, "Send $500 to my mom," and have it pre-fill the transfer form for my approval.	High
Reporting	As a user, I can download a CSV or PDF statement of my transaction history for a specific date range.	Medium

Epic	User Story	Priority
Repeat Transfers	As a user, I can quickly repeat a past transfer with a single click.	Medium
Push Notifications	As a user, I want to receive real-time push notifications on my mobile device about my transfer status.	Medium

8. Annex A: Detailed CI/CD Pipeline Breakdown

This annex provides the full breakdown of CI/CD stages, workflows, and quality/security gates in checklist format.

A.1 CI Pipeline Stages

Commit Stage (2-3 min): Linting, commit validation, pre-commit hooks, secret scanning
Build Stage (3-5 min): Dependency installation, code compilation, Docker image build
Test Stage (5-10 min): Unit tests (>80%), integration tests, API contract tests, migration tests
Security Stage (5-7 min): SAST, dependency scanning, container scans, OWASP checks
Quality Stage (3-5 min): Code metrics, technical debt, performance benchmarks
Package Stage (2-3 min): Artifact build, Docker tagging, artifact signing, push to registry

A.2 Deployment Strategy

Environments: dev, qa, staging, production
Deployment patterns: Blue-Green, Canary, Feature Flags
Approvals: QA, Product Manager, CTO
Rollback: Automatic rollback on failure
Environment configs: scaling, monitoring, approvals per stage

A.3 Security & Compliance

Pre-commit: secret detection
Build-time: SAST, dependency scans
Deploy-time: DAST, infra scans
Runtime: WAF, monitoring, RASP
Compliance automation: PCI-DSS, GDPR, AML/KYC checks

A.4 KPIs

Deployment Frequency: Daily to staging, weekly to production
Lead Time: <2 days

MTTR: <30 minutes
Change Failure Rate: <5%
